

## **PROFESSIONAL SUMMARY**

Software engineer with hands-on penetration testing experience, focused on building production-grade systems and assessing their security. Designed and deployed a real-time RFID tracking platform used in manufacturing, and developed XINAI, an AI-driven penetration-testing agent. Skilled in web and network penetration testing, vulnerability assessment, and standards-aligned reporting.

## **TECHNICAL SKILLS**

**Languages:** JavaScript, Python, Java, Typescript

**Frontend:** React

**Backend & APIs:** Node.js , REST APIs

**Databases:** PostgreSQL, MySQL

**System & Architecture:** Event Driven Architecture, Real Time Systems, Websockets

**IoT & Integration:** RFID Systems, MQTT, Hardware Integration

**Cloud & DevOps:** AWS (EC2, S3, RDS), CI/CD

**Tools:** Git, VS Code, AI Assisted Development (Claude Code, Codex), AWS Bedrock/LLM API Usage

**Security & Pentesting:** GPenetration testing (web & network) , vulnerability assessment, SQL injection, privilege escalation, Burp Suite, Nmap, Metasploit, sqlmap, Hashcat, Wireshark, OWASP Top 10, MITRE ATT&CK, CVSS, NIST SP 800-115

## **EXPERIENCE**

**JASON OF BEVERLY HILLS**, Los Angeles, CA

Nov 2021 – Present

*Full Stack Engineer/RFID & IoT Systems*

- Designed and deployed a full-stack RFID based order tracking and manufacturing workflow platform, integrating Zebra FX9600 readers and processing thousands of real-time tag events, resulting in a 30% increase in labor efficiency and a 90% reduction in manual tracking errors.
- Developed a scalable backend architecture using Node.js and PostgreSQL to support secure tracking, data storage, and real time event processing.
- Designed and optimized system logic to ensure accurate RFID tracking across multiple readers, antennas, and production workflows.
- Engineered MQTT based event streaming pipelines for sub second data delivery and reliable processing of RFID tag events.
- Built a React based dashboard for real time monitoring, system alerts, and object history visualization.
- Managed AWS infrastructure including compute, databases, and deployment environments to support scalability and system reliability.
- Leveraged LLM-based tools to accelerate development, debugging, and iteration of production features in a real-time tracking system.

**DARKSIGHT, ME INFOSEC**, Beirut, Lebanon

May 2019 – Aug 2020

*Software Developer/Sales*

- Developed and tested custom SIEM platform modules; authored and executed security test cases, identified system vulnerabilities, and improved detection coverage and product reliability.

## **PROJECTS**

**XINAI** — AI Penetration-Testing Agent (personal project) — Autonomous terminal pentest agent driving Kali tooling through a 5-phase methodology, with scope enforcement, audit logging, loot/finding management, and CVSS-scored HTML/Markdown reporting.

## **EDUCATION**

**Lebanese International University**, Beqaa Valley, Lebanon  
*Bachelor of Science, Major: Computer & Communication Engineering*

May 2021
